MySQL Assignment – 1

Instructions:

- Write only SQL Queries as answers.
- Submit your work in a single text file (.txt).
- Mention Assignment Number and Question Number clearly.

Format:

MySQL Assignment – 1
Q1)
-- SQL Query
Q2)
-- SQL Query

Questions:

Q1) Display Databases
Login to MySQL and write a query to display all databases already present in the system.

Q2) Create countries Table
Write an SQL query to create a table named countries including columns country_id, country_name and region_id.
After this display the structure of table.

Q3) Create jobs Table with Constraints
Write an SQL query to create a table named jobs including columns job_id, job_title, min_salary, max_salary.
Apply constraints:
- job_id must be Primary Key
- job_title cannot be NULL
- max_salary must not exceed 25000

Q4) Create job_history Table
Write an SQL query to create a table named job_history including columns employee_id, start_date, end_date, job_id and department_id.

Q5) Add UNIQUE Constraint
Alter the countries table so that duplicate values in country_id are not allowed during insertion.

Q6) Create jobs_default Table with DEFAULT Values
Write an SQL query to create a table named jobs_default including columns job_id, job_title, min_salary and max_salary.
Set default values:
- job_title default should be blank (“”)
- min_salary default should be 8000
- max_salary default should be NULL

Q7) Create departments Table (Composite Primary Key)
Create Department table with following structure:

Field Name	Type	Null	Key
department_id	DECIMAL(4,0)	NO	PRI
department_name	VARCHAR(30)	NO	
manager_id	DECIMAL(6,0)	NO	PRI
location_id	DECIMAL(4,0)	YES	

Composite Primary Key: (department_id, manager_id)

Q8) Create employees Table with Normal Foreign Key
Write an SQL query to create a table named employees including columns: employee_id, first_name, last_name, email, phone_number, hire_date, job_id, salary, commission, manager_id and department_id.

Column Name	Data Type
employee_id	INT
first_name	VARCHAR(50)
last_name	VARCHAR(50)
email	VARCHAR(100)
phone_number	VARCHAR(20)
hire_date	DATE
job_id	INT
salary	DECIMAL(10,2)
commission	DECIMAL(10,2)
manager_id	INT
department_id	INT

FirstBitSolutions.com ...Learn IT Bit by Bit...

Apply constraints:
- employee_id must be Primary Key
- department_id must be a Foreign Key referencing departments(department_id)

Q9) Composite Foreign Key Implementation

Step 1: Create department_managers Table
Create a table named department_managers with following structure:

Field Name	Data Type	Null	Key
department_id	DECIMAL(4,0)	NO	PRI
manager_id	DECIMAL(6,0)	NO	PRI
manager_name	VARCHAR(50)	NO	

Composite Primary Key: (department_id, manager_id)

Step 2: Apply Composite Foreign Key in employees Table
Alter the employees table so that the combination (department_id, manager_id) must exist in department_managers(department_id, manager_id).
